

# UI Design

## 1. Start Menu

--CURRENT--

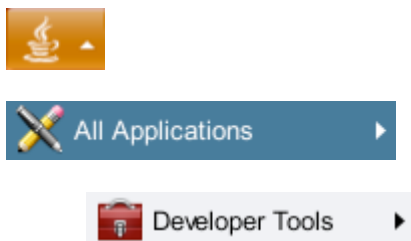

The current SXDE Start menu looks like this:

--NEW DESIGN--

We shall add an entry under **Developer Tools** labelled **A.M.P. Web App Development**

Programs available under that entry for every user immediately after SXDE installation are:

A.M.P. Web App Development >

Initialize

View Getting Started Guide

After **Initialize** is invoked the first time by a particular user, the programs available under **A.M.P. Web App Development** shall *change* to

A.M.P. Web App Development >

Start Apache2/MySQL Servers

Stop Apache2/MySQL Servers

Options

Administer MySQL

Logs >

Apache2/PHP log

MySQL log

Sample App >

Create

Run

View Getting Started Guide

See [Start Menu](#) specification for full details.

## 2. Tray Icon

This is an icon that appears in the Tray area -- an area on the right side of the user's Gnome desktop -- in the window manager taskbar.

It indicates the state of the SAMP servers, and provides access to menu commands.

See [Tray Icon](#) specification for details.

### 3. Options window

This is how the user customizes his/her SAMP setup. Normally, it is not necessary to view or change the options, as all components are preconfigured with sensible defaults for immediate use and immediate success.

See [Options](#) window specification for details.
